- Q. Please state the names of the members of the Electric and Gas Procurement Panel (“Panel”).
- A. Our names are Jeffrey M. May, Ting P. Chan, and Scott T. McDowell.
- Q. Mr. May, please state your current employer and business address.
- A. I am employed by Central Hudson Gas & Electric Corporation (“Central Hudson” or the “Company”) and my business address is 284 South Avenue, Poughkeepsie, New York 12601.
- Q. Mr. May, in what capacity are you employed by Central Hudson and what is your scope of responsibilities?
- A. I am employed by Central Hudson as Manager of the Energy Resources Division (“Energy Resources”). In that capacity, I am responsible for managing the Company’s electric and natural gas commodity procurement, commodity hedging, generation sales, and energy accounting activities. Energy Resources specific responsibilities for both gas and electric include: load forecasting; bidding and scheduling; settlement data coordination; development and implementation of hedge plans; asset optimization strategies; advocating policy positions on behalf of customers; invoice tracking, verification and approvals; monthly and quarterly financial reporting; Sarbanes Oxley compliance documentation; and audit reviews.

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 Q. Mr. May, what is your educational background and professional
2 experience?

3 A. I earned a Bachelor of Science degree in Electrical Engineering from
4 Worcester Polytechnic Institute in 1989. I also earned a Master of
5 Engineering in Electric Power from Rensselaer Polytechnic Institute in
6 1995. I have been a New York State Registered Professional Engineer
7 since 1996. My employment with Central Hudson began in 1989 as a
8 T&D Junior Engineer in Customer Services. In 1992, I was promoted to
9 Estimating Supervisor and served in that role until I was transferred to
10 Associate Engineer in Substation Design in 1995. In January 1999, I was
11 promoted to Power Marketer in a predecessor department to Energy
12 Resources. I was promoted to Section Engineer – Distribution
13 Engineering in September 2004, transferred to Section Engineer – Electric
14 System Protection in January 2008, promoted to Director – Electric
15 System Design in August 2010, promoted to Manager – System
16 Operations in October 2013, and transferred to Manager – Energy
17 Resources in August 2016.

18 Q. Mr. May, have you previously testified before the New York State Public
19 Service Commission (“PSC” or the “Commission”)?

20 A. Yes. I have testified before the Commission in Cases 17-E-0459, 17-G-
21 0460, 20-E-0428 and 20-G-0429.

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 Q. Mr. Chan, please state your current employer and business address.

2 A. I am employed by Central Hudson and my business address is 284 South
3 Avenue, Poughkeepsie, New York 12601.

4 Q. Mr. Chan, in what capacity are you employed by Central Hudson and what
5 is your scope of responsibilities?

6 A. I am employed by Central Hudson as a Senior Energy Buyer. In that
7 capacity, my responsibilities include planning, forecasting, negotiating,
8 purchasing, scheduling, and verifying electric and natural gas commodity
9 transactions required to serve Central Hudson's full-service customers. I
10 am also familiar with hedging products and techniques, and with
11 scheduling physical deliveries of natural gas and electricity. My current
12 role as a Senior Energy Buyer is primarily to be responsible for the electric
13 commodity procurement side of the business with backup responsibility for
14 natural gas commodity procurement as needed. In addition to performing
15 the electric commodity procurement activities needed to supply the daily
16 electric usage of Central Hudson's full-service customers, I also
17 participate in New York Independent System Operator ("NYISO")
18 governance meetings and other industry meetings to protect the interests
19 of Central Hudson's customers.

20 Q. Mr. Chan, what is your educational background and professional
21 experience?

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

- 1 A. I earned a Bachelor of Science degree in Electrical Engineering from
2 Cornell University in 1992. I earned a Master of Engineering degree in
3 Electric Power from Rensselaer Polytechnic Institute in 1997. I earned a
4 New York State Professional Engineer License in 2002. My employment
5 with Central Hudson began in 1992 as a Junior Engineer in the
6 Generation Planning area within the Engineering department. In 1994, I
7 was promoted to Assistant Engineer in the Generation Planning area. In
8 1998, I was promoted to Associate Engineer and was re-assigned to work
9 in the Electric Distribution Planning area. In 2003, I was promoted to
10 Engineer in the Electric Distribution Planning area. In 2004, I was re-
11 assigned to work as an Electric Operations Engineer in the Poughkeepsie
12 District. In 2006, I was transferred to work as an Energy Buyer in Energy
13 Resources. In 2023, I was promoted to Senior Energy Buyer in Energy
14 Resources.
- 15 Q. Mr. Chan, have you previously testified before the Commission?
- 16 A. Yes. I have testified before the Commission in Cases 20-E-0428 and 20-
17 G-0429.
- 18 Q. Mr. McDowell, please state your current employer and business address.
- 19 A. I am employed by Central Hudson and my business address is 284 South
20 Avenue, Poughkeepsie, New York 12601.
- 21 Q. Mr. McDowell, in what capacity are you employed by Central Hudson and
22 what is your scope of responsibilities?

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 A. I am employed by Central Hudson as an Energy Buyer. In that capacity, I
2 am responsible for planning, negotiating, evaluating, procuring, and
3 managing a hedged portfolio of electric and natural gas supply,
4 transportation, and storage contracts. I perform load forecasting and
5 analysis of wholesale electric and natural gas market dynamics to procure
6 short and long-term energy resources to meet load requirements.

7 Q. Mr. McDowell, what is your educational background and professional
8 experience?

9 A. I earned an Associate of Science degree in Business Administration /
10 Management from Dutchess Community College in 1988. I also earned a
11 Bachelor of Business Administration in Accounting from Pace University in
12 1990. My employment with Central Hudson began in 1990 as an
13 Accounting Clerk in the 2218 bargaining unit. I was promoted to a
14 management position as a Junior Accountant in the Plant Accounting
15 Department in 1992. In 1995, I was promoted to the position of Assistant
16 Plant Accounting Analyst. I transferred to the Taxes & Budgets
17 Department as an Assistant Budget Analyst in December 1996. In 1999, I
18 moved to a temporary position in a newly created Risk Management
19 Department and within the same year I was asked to take a position in
20 Energy Control. In 2000, I was promoted to an Energy Control Analyst in
21 the Energy Control Department. In 2005, I was asked to take a position in
22 the Plant Accounting Department and received a promotion to Senior

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 Plant Accountant in 2006. In 2011, I was promoted into Energy
2 Resources as an Energy Buyer.

3 Q. Mr. McDowell, have you previously testified before the Commission?

4 A. Yes. I have testified before the Commission in Cases 20-E-0428 and 20-
5 G-0429.

6 **II. PURPOSE OF TESTIMONY**

7 Q. What is the purpose of the Panel's testimony in these proceedings?

8 A. The Panel will address: (1) Central Hudson's natural gas and electricity
9 procurement strategies, plans and policies; (2) how the procurement
10 strategies, plans and policies dampen price volatility for Central Hudson's
11 customers; and (3) the need for incremental resources as a result of new
12 opportunities and responsibilities in the commodity procurement space.

13 Q. What are the Company's objectives when purchasing natural gas and
14 electric supply for its full-service customers?

15 A. The Company seeks the lowest reasonable natural gas and electric supply
16 purchase costs for its customers, subject to reliability and contractual
17 constraints. As part of this objective, the Company also seeks to dampen
18 price volatility. In addition, the Company has considered ways to
19 directionally align procurement with the goals of the Climate Leadership
20 and Community Protection Act ("CLCPA"). For example, the Company is
21 seeking approval to purchase Responsibly Sourced Gas ("RSG" or
22 "Certified Gas"), with financial limits.

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 Q. Is the Panel sponsoring any exhibits in support of its testimony?

2 A. No.

3 **III. NATURAL GAS SUPPLY REQUIREMENTS**

4 Q. How does Central Hudson meet the natural gas supply requirements of its
5 customers?

6 A. Central Hudson meets its customers' natural gas requirements by utilizing
7 various wholesale contract assets that deliver natural gas to the
8 Company's four city gates. Natural gas is purchased primarily from
9 suppliers located in the Northeastern United States ("U.S.") and
10 transported on interstate pipelines pursuant to firm transportation ("FT")
11 contracts to a Central Hudson city gate. Natural gas is also purchased
12 from suppliers located in eastern Canada. Canadian gas is transported
13 pursuant to FT contracts with Enbridge Gas (formerly Union Gas) and TC
14 Energy (formerly TransCanada) to a delivery point with Iroquois Gas
15 Transmission Pipeline at Waddington, New York. The Northeastern U.S.
16 and Canadian supplies form a base of flowing supplies that are
17 supplemented with storage gas and peaking gas contracts. Central
18 Hudson also utilizes short-term supply contracts to meet its customers'
19 demands for natural gas throughout the year. Offers are solicited via a
20 competitive Request for Proposal ("RFP") process for the five-month
21 winter season (November – March) as well as monthly and/or the summer
22 season based on volumetric needs. The gas supplied by the above

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 contracts is delivered using FT to Central Hudson’s four city gate stations
2 (Cedar Hill, Pleasant Valley, Somers, and Tuxedo) by four interstate gas
3 pipelines (Tennessee, Iroquois, Algonquin, and Millennium) and FT
4 supporting contracts with Texas Eastern, Columbia, Stagecoach, TC
5 Energy (formerly TransCanada) and Enbridge Gas (formerly Union Gas)
6 Pipelines. In addition, Central Hudson has seven contracts with four
7 companies for the storage of natural gas. Storage gas is transported to
8 Cedar Hill, Somers, and Tuxedo by four of the interstate pipelines utilizing
9 Firm Storage Transport (“FST”) service. The FT, storage and FST
10 contracts are long-term (multi-year) agreements. Central Hudson also
11 utilizes peaking contracts in winter months to meet firm peak day
12 requirements during very high natural gas demand days.

13 Q. How does Central Hudson know how much gas supply to purchase for an
14 upcoming season?

15 A. Central Hudson annually reviews the normal and peak day 5-year sales
16 forecasts provided by Costs, Rates, & Forecasts. This sales forecast
17 provides the basis for winter season normal and peak send-out and total
18 send-out volumes. As a supplement to this information, Energy
19 Resources calculates a 3-year and 5-year historical average monthly
20 send-out to determine the monthly volumes expected for the upcoming
21 winter season. Assumptions are made regarding the monthly volumes of
22 storage to be used based on historical patterns and timing of contract

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 ratchet requirements. Base volumes of supply are procured to fill as much
2 FT space as needed for each month; any remaining incremental
3 requirements provide the basis for peaking services. Separately, a similar
4 review of historical send-outs is performed prior to summer season supply
5 RFPs. The seven-month summer season volumes are typically
6 consistently low and predictable but they are similarly analyzed to
7 determine requirements and maintain system reliability. Lastly, a matrix is
8 created for storage refills based on winter season ending balances,
9 achievement of 95% full by October 31st, and spreading refill volumes over
10 the seven-month timeframe based on a dollar-cost-average strategy.

11 Q. What is Central Hudson’s recent total system peak day capacity?

12 A. The table below shows, by component, Central Hudson’s total system firm
13 peak day capacity in Dth/day (2022/2023 heating season).

Flowing Supplies	48,942
Storage Withdrawals	40,939
Winter Peaking Service	43,000
Spot Gas	5,000
Recallable Capacity (Asset Management Agreement)	0
Marketer Provided Supplies	<u>31,651</u>
Total Central Hudson and Marketer Supplies	169,532

14

15 Q. What is the typical operating excess, or reserve margin, for gas
16 distribution utilities?

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 A. The 2009 Management Audit Report issued February 28, 2011, in Case
2 09-M-0764, identified (on page VI-11) that the typical operating excess is
3 5-10% over the peak day demand.

4 Q. What is Central Hudson's position with respect to the volume of capacity
5 needed as operating excess or reserve margin?

6 A. Based on a 10-year historical look-back period, the Company has neither
7 exceeded its forecasted peak demand nor utilized any reserve margin
8 supplies and the Company is comfortable remaining consistent with the
9 low end of the range identified in the 2009 Management Audit Report
10 (~5%) as an acceptable level of operating excess or reserve margin. The
11 Company has continued to maintain this level of reserve margin as shown
12 in our annual Winter Supply Review filings with New York Department of
13 Public Service Staff ("Staff").

14 Q. What reserve margin did Central Hudson realize during Winter 2022-23
15 and how much capacity would be needed to deliver requisite supplies on a
16 peak day basis?

17 A. Central Hudson's Winter 2022-23 actual peak day delivery capability
18 totaled 169,532 dekatherms. This resulted in a peak day reserve margin
19 of 5.5 percent based on the estimated firm requirements for 2022-23
20 Winter peak day forecasted design weather of 160,661 dekatherms.

21 Q. Does Central Hudson develop day-ahead forecasts to ensure reliability?

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 A. Yes, Central Hudson develops a day-ahead rolling demand reliability
2 forecast to ensure that the short-term requirements of its natural gas
3 customers are met.

4 Q. How does the Company forecast its day-ahead requirements?

5 A. Central Hudson has implemented a two-model system for the daily
6 forecasting of natural gas requirements. The Company utilizes a
7 combination of the results from an internally developed Excel spreadsheet
8 model and a commercially developed model, GasDay, for forecasting daily
9 rolling 24-hour send-out forecasts and supply requirements. The resultant
10 forecast is comprised of a base load component (usage that is not
11 weather sensitive) and a heating usage component (weather sensitive).
12 Heating usage is calculated as the product of the daily forecast of effective
13 degree days (“EDD”) and usage per EDD. EDD is a measurement
14 designed to reflect the demand for energy needed to heat a home after
15 taking wind and cloud cover into consideration. A gas day (10am – 10am)
16 weather forecast is received two times per day from the weather
17 forecasting service vendor WSI, Inc. Depending on the specific month in
18 the heating season, unusual weather patterns, or a particular day of the
19 week or weekend, minor manual adjustments to the forecasted send-out
20 may be necessary. The Company has the ability to make intra-day
21 changes to the send-out forecast and requirements with gas suppliers or
22 pipelines or both, as necessary, due to changes in the weather.

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 Q. Does the Company monitor the performance of its' gas send-out
2 forecasts?

3 A. Yes, the Company monitors the performance of its gas send-out forecast
4 to within a monthly average accuracy range of 95% to 105%, or +/- 5%,
5 inclusive of weather accuracy.

6 Q. Why does Central Hudson develop long-term supply forecasts?

7 A. Each year, Central Hudson prepares a gas capacity/supply plan for the
8 upcoming winter season in response to the Winter Supply Review filed
9 with Staff to ensure that sufficient peak day capacity is available to firm
10 service customers, who the Company has an obligation to serve. A five
11 year sales and peak forecast is part of that annual review and filing.
12 Central Hudson recognizes that actions to address supply needs must be
13 initiated well in advance of the actual requirements, which provides the
14 basis and importance of the forward-looking plan.

15 Q. Does Central Hudson have available excess upstream capacity?

16 A. Yes. The Company can have available upstream capacity at varying
17 levels throughout the calendar year. The level of excess capacity is
18 directly related to the customer demand requirements on any given gas
19 day. The Company does not have excess capacity on any day when the
20 send-out exceeds the Company's aggregate transmission capacity
21 contract volumes.

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 Q. What does Central Hudson do with the available upstream capacity during
2 off-peak periods?

3 A. Central Hudson releases available upstream transportation and storage
4 capacity to an Asset Manager (“Manager”) under an Asset Management
5 Agreement (“Agreement”). The Agreement provides the Manager with
6 Central Hudson’s entire portfolio of storage and transportation capacity
7 assets. The Manager can utilize the Company’s excess capacity as it
8 sees fit to extract value after slices of the system are released to
9 Aggregators and the Company’s daily delivery requirements are met.
10 Operationally, the Company retains the responsibility to forecast system
11 send-out and submits supply requirements daily to the Manager, who will
12 transport daily base and storage requirements to the Central Hudson city
13 gates as necessary to assure reliable gas supplies to the Company’s full-
14 service and delivery customers. Further, the Agreement provides storage
15 refill services during the summer and, at any time necessary, the ability to
16 purchase or sell daily volumes of spot gas. The Company has retained
17 the ability to purchase base and peaking services through a competitive
18 RFP process to maintain customer price transparency. The Agreement
19 allows Central Hudson to optimize the value of the entire portfolio for the
20 entire year. The system-wide Asset Management approach, in turn,
21 maximizes the Company’s ability to reduce commodity bill pressure.

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 Q. Has Central Hudson made any changes to its portfolio of transportation
2 and storage contracts or supply mix in this case?

3 A. Central Hudson has not made any changes to its natural gas
4 transportation or storage contracts during the current rate plan, aside from
5 normal contract extensions, and has retained all physical storage
6 contracts and associated transportation contracts for delivery of storage
7 gas to the Company's territory. Central Hudson has considered
8 Renewable Natural Gas ("RNG") and RSG as gas supply enhancements
9 in support of the CLCPA's greenhouse gas emissions reduction targets.
10 The Company began requesting separate pricing and availability of RNG
11 in 2021 and RSG since early 2023 in each of its periodic competitive
12 supply RFPs. The Company was successful in securing RSG as base
13 supply during the summer of 2022 (May through October) under a
14 Research and Development pilot project. Further, the Company was
15 successful in procuring RSG base gas supplies below the annual
16 weighted average cost of "standard" natural gas as part of its competitive
17 RFP process. The Company procured RSG for its base supply for the
18 April through October 2023 summer season.

19 Q. How does the Company view RSG going forward?

20 A. The Company has been including RSG as an alternative in its periodic
21 supply RFPs. The Company intends to select RSG when competitive
22 RFP pricing is at or less than the weighted average cost of natural gas

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 supply. Further, the Company is seeking authorization to procure RSG
2 when RSG offers are higher than the annual weighted average cost of
3 “standard” gas to the extent that the incremental cost in a supply year
4 (April through March) does not exceed \$200,000. The environmental and
5 societal benefits of procuring RSG are described in detail by the Climate
6 Leadership and Sustainability Panel.

7 Q. Does Central Hudson employ hedging or pricing strategies to dampen
8 market price fluctuations with respect to its Winter gas supply contracts?

9 A. Yes. A hedging plan is developed by Energy Resources and approved by
10 Central Hudson’s Enterprise Risk Management Committee (“ERMC”).
11 Energy Resources implements the approved hedge plan through
12 managing physical storage injections and securing over-the-counter
13 (“OTC”) fixed for floating swap contracts with various counterparties prior
14 to the upcoming winter heating season. These contracts are purchased
15 on a set multi-month schedule to provide a dollar-cost average hedge
16 price of winter natural gas supply contracts. The OTC contracts fix the
17 price of a portion of Central Hudson’s winter gas supply for the upcoming
18 heating season and dampens price volatility. Central Hudson also refills
19 storage during the April – October time period to ensure that its natural
20 gas storage contract assets are physically full by the first of November,
21 prior to the start of the heating season. The combination of financial
22 investments and the Company’s physical storage gas provides a hedge

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 against winter natural gas price volatility by fixing the price of Central
2 Hudson's full-service customers' natural gas usage in accordance with the
3 Commission's Statement of Policy Regarding Gas Purchasing Practices,
4 issued and effective April 28, 1998, in Case 97-G-0600. The hedging
5 strategy dampens natural gas price volatility, which translates directly to
6 incrementally less volatile energy bills for Central Hudson's full-service
7 customers during the heating season. Energy Resources reports on
8 energy procurement activities and the current status of commodity
9 markets to the ERMC on a periodic basis and conveys details of the
10 hedging plan in the annual Winter Supply Review filing and meeting with
11 Staff.

12 Q. Please describe the natural gas policy activities that Energy Resources
13 participates in.

14 A. Central Hudson needs to stay informed of natural gas policy issues in both
15 the U.S. and Canada. In the U.S., the Company focuses specifically on
16 the Northeastern U.S. and New York State. Decisions by the Federal
17 Energy Regulatory Commission ("FERC") relating to the Natural Gas Act
18 can impact supply and transportation availability to the Company for its
19 customers. Similar impacts can result from the Canadian Energy
20 Regulator and Canadian supplies and transportation contracts. In late
21 2021, the Company's long-standing agreement with Alberta North East
22 ("ANE") ended due to ANE closing their business. ANE provided supply

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 scheduling, administrative, and legal consulting services to Central
2 Hudson and many other natural gas utilities in the Northeastern U.S. The
3 scheduling and administrative responsibilities have been folded back into
4 Energy Resources. The Company also has a vested interest in monitoring
5 and participating in interstate pipeline rate cases or proceedings at FERC.
6 Last, and perhaps most impactful, is the on-going CLCPA initiatives in
7 New York State. Through Case 20-G-0131, mentioned above, the
8 Company will have an opportunity to extend its gas supply planning
9 process from five years to 20 years.

10 **IV. ELECTRIC SUPPLY REQUIREMENTS**

11 Q. How does Central Hudson meet the electric supply requirements of its
12 customers?

13 A. Central Hudson meets the electric supply requirements of its customers
14 principally through wholesale purchases made from the NYISO and
15 through contract purchases (e.g., legacy contracts with independent
16 power producers). The purchases from NYISO include electric energy,
17 ancillary services, and electric capacity. In addition, small amounts of
18 electric energy are obtained from Company-owned generation (hydro-
19 electric generators and combustion turbine generators) retained primarily
20 for local electric reliability purposes.

21 Q. How does the Company currently forecast day-ahead electric energy
22 requirements?

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 A. The Company uses a cloud-based Software as a Service (“SaaS”)
2 application under contract with TESLA Forecasting Solutions
3 (“Forecasting Solutions”). The Forecasting Solutions electric load
4 forecasting model uses a combination of historical hourly electric load
5 patterns and multiple weather forecasting services to develop a short-term
6 forward forecast of the expected hourly electric load. The model produces
7 a forecast of hourly electric load for a seven-day period. This hourly
8 electric load forecast is developed by the Forecasting Solutions software
9 using two different seven-day hourly weather forecasts (Maxar weather
10 forecast and DTN weather forecast), historical hourly electric load data,
11 and historical hourly weather data. The Forecasting Solutions software
12 has proprietary programming routines that automatically choose the
13 combination of historical hourly weather data and historical hourly electric
14 load patterns to forecast the upcoming seven-day hourly electric load
15 based on the two different seven-day hourly weather forecasts. The
16 Forecasting Solutions software recognizes holidays, weekends, and other
17 unusual electric load conditions so that the inclusion of such data does not
18 distort the typical weather-load relationship. Central Hudson has retained
19 the WSI, Inc. weather forecasting service, which an Energy Buyer can
20 also use, in addition to other publicly available weather forecasts (e.g., the
21 Weather Channel), to monitor changes in forecasted weather from the
22 original time that the electric load forecast was developed. This

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 independent weather service (provided by WSI, Inc.), which is delivered
2 via electronic mail twice daily, provides Central Hudson with an
3 opportunity to proactively monitor and re-run the Forecasting Solutions
4 software and revise the electric load forecasts as needed. The Energy
5 Buyer also receives a monthly forecast of the total retail access
6 customers' electric load. This retail access customers' electric load
7 forecast is used to determine the Central Hudson full-service customers'
8 hourly electric load requirements by subtracting the hourly weekday or
9 hourly weekend retail access customers' electric load forecast from the
10 Forecasting Solutions software's hourly electric load forecast.

11 Q. Do Central Hudson's electric load forecasts include the effects of solar
12 photovoltaic ("PV") resources or battery storage resources?

13 A. Yes. The Forecasting Solutions electric load forecasting model performs
14 a proprietary analysis on Central Hudson's system-wide aggregate electric
15 load. The system-wide aggregate electric load includes the net effects of
16 behind-the-meter ("BTM") solar PV resources and BTM solar PV
17 resources that are coupled with battery storage resources. The
18 Forecasting Solutions software considers the volume of interconnected
19 BTM solar PV resources and their impact on the system-wide electric load
20 forecasts. On a monthly basis, Central Hudson provides Forecasting
21 Solutions with the latest cumulative total megawatt ("MW") quantity of
22 interconnected BTM solar PV resources, including BTM solar PV

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 resources that are coupled with battery storage resources, that are
2 interconnected to the Central Hudson electric system so that Forecasting
3 Solutions can periodically update its electric load forecasting model and
4 account for the effects of BTM solar PV resources when developing its
5 hourly electric load forecasts. The cumulative total amount of stand-alone
6 BTM battery storage resources interconnected to the Central Hudson
7 electric system is less than 1 MW as of March 31, 2023, so BTM battery
8 storage resources have a negligible impact on Central Hudson's electric
9 load forecasting process. As BTM solar PV resources and stand-alone
10 BTM battery storage resources increase on Central Hudson's electric
11 system, Energy Resources will continue to communicate with the
12 appropriate internal groups and provide the periodic updates to
13 Forecasting Solutions. This will allow Forecasting Solutions to use this
14 information to continue to adjust the electric load forecasting model to
15 properly account for the changing Central Hudson electric system when
16 used to develop hourly electric load forecasts.

17 Q. Does Central Hudson monitor the performance of its electric load
18 forecasts?

19 A. Yes, Central Hudson monitors the performance of its electric load
20 forecasts to within a monthly average accuracy range of 95% to 105%, or
21 +/- 5%, inclusive of weather forecast accuracy.

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 Q. What electric generating assets does Central Hudson currently own?

2 A. Central Hudson currently owns, operates, and maintains two combustion
3 turbine generators (Coxsackie and South Cairo) and three small
4 hydroelectric generating facilities (Sturgeon Pool, Dashville, and High
5 Falls). These electric generating facilities have nameplate ratings of 25.0
6 MVA, 25.0 MVA, 18.0 MVA, 6.0 MVA, and 3.6 MVA, respectively.

7 Q. How does Central Hudson manage these electric generation assets?

8 A. When not providing local electric reliability services, the Company
9 maximizes the two combustion turbine generator assets by bidding and
10 scheduling their availability in the NYISO Day Ahead Market and Real
11 Time Market for electric energy generation and ancillary services and by
12 using their electric capacity to financially benefit Central Hudson delivery
13 customers. The three hydroelectric generating facilities are primarily run-
14 of-river hydro units, and as such, they are used as electric load modifiers
15 on the Central Hudson electric system and not bid or scheduled in the
16 NYISO wholesale markets.

17 Q. Does Central Hudson have contracts with third party generators?

18 A. Yes, Central Hudson has three (3) residual and active legacy contracts
19 with FERC Public Utility Regulatory Policies Act ("PURPA") Qualifying
20 Facility Independent Power Producers ("IPP"). The aggregate maximum
21 generation from these 3 IPPs is approximately 11 MW.

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

- 1 Q. Does Central Hudson employ hedging or pricing strategies to reduce the
2 risk of market price fluctuations with respect to electric supply purchases
3 made for full service electric customers?
- 4 A. Yes, Energy Resources annually develops an Electric Hedge Plan that
5 recommends the volume and duration of financial and physical future
6 electric energy product, electric capacity product, and weather option
7 product needed to dampen the electric supply price volatility for full-
8 service customers, excluding Hourly Pricing Provision (“HPP”) customers.
9 The annual Electric Hedge Plan is presented to, discussed with, and
10 approved by the Company’s ERMC. Once approved, Energy Resources
11 implements the Electric Hedge Plan through competitive RFP purchases
12 of products including financial electric energy Contract for Differences
13 purchases, physical electric capacity purchases, and a winter season
14 financially settled weather option purchase. Central Hudson’s goal is to
15 dampen the electric supply price volatility of full-service customers
16 (excluding HPP customers) by locking in the price of a portion of the
17 Company’s full-service customers’ forecasted annual electric supply in
18 advance of the delivery month. Each annual Electric Hedge Plan is
19 developed, and the performance is measured in accordance with the
20 requirements outlined in the series of PSC Orders under Case 06-M-1017.
21 Energy Resources reviews the Electric Hedge Plan twice annually with
22 Staff.

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 Q. Please describe how Central Hudson purchases its Electric Capacity (i.e.,
2 Unforced Capacity (“UCAP”).

3 A. Central Hudson forecasts its UCAP requirements based on a three to five
4 -year historical average. UCAP purchases made as part of Central
5 Hudson's Electric Hedge Plan are done using competitive RFPs through
6 the broker market and through bilateral transactions. Bilateral
7 transactions also include the Company’s two combustion turbine
8 generators. The remaining amount of UCAP is purchased through the
9 NYISO Capacity Market spot auction every month.

10 Q. In what electric market activities does Energy Resources participate?

11 A. Energy Resources actively participates in the NYISO Business Issues
12 Committee (“BIC”) and BIC sub-committee meetings. Specifically, Energy
13 Resources team members actively participate in NYISO Installed Capacity
14 Working Group, Market Issues Working Group, and Billing, Accounting, &
15 Credit Working Group meetings. Additionally, Energy Resources actively
16 monitors and participates with the Joint Utilities in meetings and the
17 submission of comments related to a number of PSC proceedings,
18 including but not limited to the Clean Energy Standard (Case 15-E-0302),
19 Energy Storage Deployment (Case 18-E-0130), and Distributed Energy
20 Resource Implementation of FERC Order 2222 (Case 22-E-0549). The
21 Energy Resources Manager is a member of the Edison Electric Institute’s
22 Energy Policy Executive Advisory Committee. Participation in these

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 activities provides Energy Resources the ability to stay current with
2 electric energy policy initiatives, anticipate future electric market and
3 regulatory obligations, and also provides a voice for the Company's
4 advocacy of electric energy policy rules that protect the interest of the
5 Company's electric delivery customers.

6 Q. How does Central Hudson manage PSC Clean Energy Standard
7 obligations?

8 A. Energy Resources assumed responsibilities associated with tracking,
9 managing, and complying with the various Implementation Plans for
10 Renewable Energy Credits ("REC") and Zero Emissions Credits ("ZEC").
11 While management of the Tier 2 REC and Tier 3 ZEC programs have
12 been relatively straightforward, the management of the Tier 1 REC
13 program has required significant labor resource hours. Energy Resources
14 has folded in incremental responsibilities relating to managing the Tier 1
15 REC program through the New York Generator Attribute Tracking System
16 ("NYGATS"). This NYGATS software requires a system administrator who
17 is responsible for tracking Tier 1 REC obligation compliance through the
18 New York State Energy Research and Development Authority
19 ("NYSERDA") Tier 1 REC sales and through compliance certification for
20 each compliance year since 2017. Further, the designated administrator
21 also manually inputs Value Stack generation for validation by NYSERDA,
22 minting of Tier 1 RECs, and managing sub-accounts in NYGATS to

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 minimize compliance costs and maximize electric delivery customers' and
2 full-service electric customers' value.

3 Q. How has Central Hudson managed the PSC Energy Storage Deployment
4 Order obligations?

5 A. Energy Resources has assumed lead responsibility for the Company's
6 2019 and 2021 bulk energy storage competitive RFP processes in
7 response to the PSC's Energy Storage Deployment Program provided in
8 Case 18-E-0130. Energy Resources assembled a cross-functional team
9 of Subject Matter Experts in the areas of Legal, Engineering,
10 Interconnections, Real Property, Treasury/Risk Management, Project
11 Management, and NYISO Markets ("Energy Storage RFP Team"). This
12 Energy Storage RFP Team developed the Company's Implementation
13 Plan, a full set of RFP documents (including Appendices), two economic
14 evaluation models (one for electric energy and ancillary services revenue
15 and a second for electric capacity revenue), a project evaluation matrix,
16 and a generic Energy Storage Services Agreement ("ESSA") for dispatch
17 rights. The team successfully managed two competitive RFPs. The first
18 RFP process (started in 2019) did not yield any Agreements for dispatch
19 rights. The second RFP process (started in 2021) is not yet complete,
20 pending conclusion due to some developer requirements that must be
21 completed before the ESSA can be signed by both parties. The team
22 plans to continue seeking bulk storage resources until it meets or exceeds

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 the 10MW procurement requirement set by the PSC, with anticipated on-
2 going obligations to manage dispatch rights agreements through to
3 conclusion.

V. STAFFING NEEDS

4
5 Q. Does Energy Resources require additional Company resources to perform
6 the policy activities related to natural gas discussed in this testimony?

7 A. Yes, at least one dedicated resource is necessary to handle the increased
8 workload in support of the incremental tasks that have been folded in over
9 the past several years. The incremental work load includes, and is not
10 limited to, increased documentation for Sarbanes Oxley compliance,
11 administration of Value Stack (Case 15-E-0751) generation and Clean
12 Energy Standard (Cases 15-E-0302 and 18-E-0071) Tier 1 REC tracking
13 through NYGATS, gas administrative tasks formerly performed by ANE,
14 administrative tasks related to managing the Bulk Energy Storage (Case
15 18-E-0130) RFP, incremental analytics and on-going participation related
16 to the Commission's Gas Planning Proceeding (Case 20-G-0131) Long
17 Term Gas Plan requirements, and incremental analytics related to DER
18 Implementation of FERC Order 2222 and PSC Case 22-E-0549.

19 Q. What impact have electric policies and NYISO governance activities had
20 on Energy Resources?

21 A. The Energy Resources labor complement has been static for almost 20
22 years. In that timeframe, incremental responsibilities associated with the

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 following work activities have materially increased Energy Resources
2 employee workloads:

- 3 (1) increasingly complex NYISO market rules and deadlines;
4 (2) significant increase in the quantity of NYISO governance
5 meetings and time spent to work with other NYISO stakeholders
6 and NYISO staff to create new and to revise existing NYISO market
7 rules and NYISO processes for Central Hudson's electric
8 customers in response to the CLCPA;
9 (3) increased time spent to follow and participate in Joint Utilities
10 meetings and other industry meetings to coordinate with other New
11 York State utilities regarding the accelerated changes being made
12 to the energy markets to address climate-related initiatives;
13 (4) incremental compliance obligations relating to Sarbanes Oxley
14 rules; and
15 (5) incremental responsibilities relating to the PSC Clean Energy
16 Standard and Energy Storage Deployment Program.

17 Q. How does the Company propose to handle the incremental workload
18 related to natural gas and electric initiatives described above?

19 A. Energy Resources requires additional labor resources to manage past
20 fold-ins, to continue active meeting participation for protecting Central
21 Hudson customer interests with the evolving NYISO market rules and New
22 York State energy policy initiatives, and to prepare for future energy

**DIRECT TESTIMONY OF THE ELECTRIC AND GAS
PROCUREMENT PANEL**

1 storage dispatch right management obligations. As a result, Energy
2 Resources will add one employee in the Rate Year to handle the
3 increased workload to support these initiatives. This resource has been
4 reflected by the Workforce, Compensation, and Benefits Panel.

5 Q. Does this conclude your direct testimony at this time?

6 A. Yes, it does.
